

Use Case:	Create a login page
User Role and Name:	pub employee
Created By:	Devin Freeman
User Story:	as a pub employee, I want to be able to login and have all the options available to me be obvious to spot, and easy to access/navigate.
Goal:	Quick, accurate point of sale actions and customer service tools, EI: on-top. different roles have different options available
Preconditions:	<ul style="list-style-type: none"> - Available on-tap, user role set and logged in - prices and on-hand inventory have been set and are up to date. - brew ingredients available within 1-2 button clicks/taps - options NOT available for use by the current role should not be visible. - employee should be able to reserve kegs for parties as well as see if a beer will be available.
Successful Scenario Steps	<ul style="list-style-type: none"> - An employee starts their shift, and logs into the system. - a full login should not be required again until either 12 hours have passed since the last login, or they end their shift (an avatar will represent their session on a common app lock-screen. - at point-of-sale, the system should allow the pub employees to limit the need to travel between guest and information source. - logging in should be the only step for selecting the current user role. - If a guest asks for batch information or what is on tap for example, that information if quick and easy to access by the employee. - a guest comes to an order decision, and the order is placed table side. - the order is easy and quick to make, using a set of intuitive dashboard style buttons with different layers of buttons organizing different categories.
Post Conditions	<ul style="list-style-type: none"> - fulfilled orders should accurately subtract from inventory. - orders are tracked until end of life or end of session, meaning sit down orders will act differently than reserve orders, as far as life-span.
Exception Conditions	<ul style="list-style-type: none"> - inventory has not been updated -received inventory but no order tracked order placed and never received - role has not been set - user not logged in
